LOW DROP FIXED AND ADJUSTABLE POSITIVE VOLTAGE **REGULATORS**

DESCRIPTION

The UTC LD1117/A is a LOW DROP Voltage Regulator able to provide up to 0.8/1.0A of Output Current, available even in adjustable version (Vref=1.25V). Concerning fixed versions, are offered the following Output Voltages: 1.8V, 2.5V, 2.85V, 3.0V, 3.3V and 5.0V. The 2.85V type is ideal for SCSI-2 lines active termination. The device is supplied in: SOT-223, TO-252, SOP8 and TO-220. The SOT-223 and TO-252 surface mount packages optimize the thermal characteristics even offering a relevant space saving effect. High efficiency is assured by NPN pass transistor. In fact in the case, unlike than PNP one, the Quiescent Current flows mostly into the load. Only a very common $10\mu F$ minimum capacitor is needed for stability. On chip trimming allows the regulator to reach a very tight output voltage tolerance, within ±1% at 25°C. The ADJUSTABLE LD1117/A is pin to pin compatible with the other standard Adjustable voltage regulators maintaining the better performances in terms of Drop and Tolerance.

FEATURES

- *Low dropout voltage (1V Typ.)
- *2.85V device performances are suitable for SCSI-2 active termination
- *Output current up to 0.8/1.0A
- *Fixed output voltage of: 1.8V,2.5V, 2,85V, 3.0V, 3.3V, 5.0V
- *Adjustable version availability (Vref=1.25V)
- *Internal current and thermal limit
- *Available in ±1%(at 25°C) and 2% in all temperature range
- *Supply voltage rejection: 75dB (TYP)
- *Temperature range: 0°C to 125°C

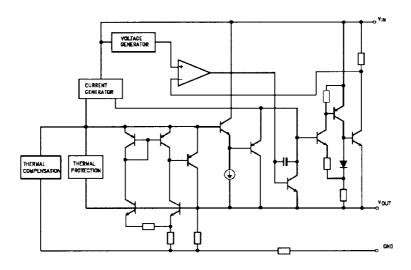

SOP-8 1: GND; 2,3,6,7: Vout;

MARKING INFORMATION

Note: The current code "A" means output current up to 1.0A, while without "A" means output current up to 0.8A.

BLOCK DIAGRAM

ABSOLUTE MAXIMUM RATINGS

| PARAMETER | SYMBOL | VALUE | UNIT |
|-----------------------------------|--------|--------------------|------|
| DC Input Voltage | VIN | 15 | V |
| Power Dissipation | Ptot | 12 | W |
| Storage temperature | Tstg | -65 ~ + 150 | °C |
| Operating Junction Temperature | Тор | 0 ~ +125 | °C |

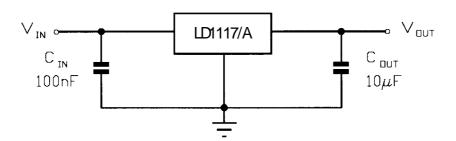

Note: Absolute Maximum Ratings are those value beyond which damage to the device may occur. Functional operation under there condition is not implied. Over the above suggested Max Power Dissipation a Short Circuit could definitively damage the device.

THERMAL DATA

LD1117/A ADJUSTABLE APPLICATION NOTE

The LD1117/A ADJUSTABLE has a thermal stabilized 1.25 \pm 0.012V reference voltage between the OUT and ADJ pins. I_{ADJ} is 60 μ A typ. (120 μ A max.) and Δ I_{ADJ} is 1 μ A typ. (5 μ A max.).

R1 is normally fixed to 120Ω . From figure 7 we obtain:

 $V_{OUT} = V_{REF} + R2(I_{ADJ} + I_{R1}) = V_{REF} + R2(I_{ADJ} + V_{REF} / R1) = V_{REF}(1 + R2/R1) + R2 \times I_{ADJ}$

In normal application R2 value is in the range of few Kohm,, so the R2 X I_{ADJ} product could not be considered in the V_{OUT} calculation; then the above expression becomes: $V_{OUT}=V_{REF}(1+R2/R1)$

In order to have the better load regulation it is important to realize a good Kelvin connection of R1 and R2 resistors. In particular R1 connection must be realized very close to OUT and ADJ pin, while R2 ground connection must be placed as near as possible to the negative Load pin. Ripple rejection can be improved by introducing a 10μ F electrolytic capacitor placed in parallel to the R2 resistor (See Fig. 8)
